1. Executive Summary

Seven Waves ERP is a next-generation, fully integrated restaurant management platform engineered to replace fragmented, error-prone legacy workflows with a single, unified digital ecosystem. Built on the battle-tested Quasar Framework, Supabase cloud database, and the Tauri native desktop runtime, it delivers enterprise-grade performance across web browsers, Windows, and macOS — all from one codebase.

This proposal outlines how Seven Waves ERP transforms every dimension of restaurant operations — from the moment a customer is seated to the final financial close — eliminating manual errors, reducing food waste by up to 35%, and accelerating table turnover by 25%. The result is a measurably more profitable, efficient, and customer-centric dining enterprise.

Why Choose Seven Waves ERP?

- Real-time, cloud-synchronized data across all stations and branches
- Offline-capable desktop mode — operations never stop, even without internet
- Role-based access ensuring data security and operational clarity
- Sub-second UI response times using reactive, compiled frontend architecture
- Full audit trail for every financial and inventory transaction
- Cross-platform: Web, Windows Desktop, macOS — one unified codebase

2. Problem Statement

The restaurant industry operates within razor-thin margins. Despite this, the majority of mid-to-large restaurant operations still rely on a patchwork of manual processes, disconnected POS terminals, and paper-based inventory systems — creating cascading operational failures that silently bleed revenue.

Critical Pain Points Identified

- **Order Inaccuracy:** Manual order-taking results in a ~12% error rate, leading to re-fires, customer dissatisfaction, and direct revenue loss.
- **Inventory Wastage:** Without real-time stock tracking, over-purchasing and spoilage account for 30–40% of food cost overruns monthly.
- **Slow Billing Cycles:** Paper-based or siloed POS systems slow table turnover, reducing revenue per seat-hour by up to 25%.
- **Staff Accountability:** Untracked access and no audit logs make it impossible to identify theft, discrepancies, or performance issues.
- **Blind Financial Reports:** Monthly manual reconciliation is slow, error-prone, and provides no actionable real-time intelligence.
- **No Branch Centralization:** Multi-branch operations suffer from zero visibility — managers cannot compare performance or transfer resources.

These are not minor inconveniences. Each represents a direct, quantifiable drain on profitability.

Seven Waves ERP was purpose-built to eliminate every one of them.

3. Solution Overview

Seven Waves ERP is a fully integrated, modular platform covering every operational vertical of a modern restaurant. It is not a generic software adaptation — it was designed from the ground up specifically for the hospitality industry, addressing real-world challenges faced by restaurant teams daily.

Core System Modules

- **Point of Sale (POS):** High-speed, touch-optimized cashier interface with quick-cash denomination grid, real-time change calculation, and instant bill printing.
- **Real-Time Inventory:** Live stock tracking with auto-deduction on sale, low-stock alerts, GRN (Goods Receipt Notes), and wastage logging.
- **Kitchen Display System:** Digital ticket management replacing paper chits — orders streamed live to kitchen stations with priority and timer indicators.
- **Table Management:** Visual floor-plan editor with real-time table status updates (Available / Occupied / Reserved / Bill Requested).
- **Staff Management:** Role-based user accounts (Super Admin, Manager, Cashier, Waiter, Kitchen, Delivery) with performance tracking.
- **Financial Analytics:** Live dashboards showing revenue, costs, profit margins, top-selling items, and trend analysis.
- **Cloud Sync via Supabase:** All data is securely synchronized to the cloud in real-time — enabling multi-device, multi-branch access with zero data silos.
- **Delivery Management:** Real-time delivery tracking with vehicle-aware routing and live driver location tracking.
- **Waiter App:** Dedicated waiter interface for order taking, table requests, and receiving instant kitchen notifications.

4. Key Features & Modules

4.1 Point of Sale (POS) Terminal

- Touch-optimized product grid with category filtering and fast search
- Quick Cash grid — one-tap selection (LKR 100, 500, 1,000, 5,000 denominations)
- Real-time change calculation displayed before payment confirmation
- Thermal bill printing with customizable restaurant branding and QR code
- Discount & promotion management with manager override authorization
- Split bill and multi-payment-method support (Cash, Card, Digital Wallet)

Ø=Ü÷ Insert POS Interface Screenshot Here

(Replace this placeholder with the actual screenshot from the system)

4.2 Table Management

- Interactive visual floor-plan editor — drag-and-drop table positioning
- Live status color coding: Green (Available), Red (Occupied), Amber (Bill Requested)
- Table merge / seat count adjustment for large groups
- Reservation system with time-slot booking and notification reminders
- Waiter assignment per table with order history log

(Replace this placeholder with the actual screenshot from the system)

4.3 Kitchen Display System (KDS)

- Real-time digital ticket board replacing paper order chits
- Priority flagging for time-sensitive or VIP orders
- Color-coded timer indicators — orders turn amber (5 min) !' red (10 min overdue)
- Mark-as-ready button triggers instant notification to waiter's device
- Persistent order history with preparation timestamps for quality auditing

(Replace this placeholder with the actual screenshot from the system)

4.4 Multi-User Role Access Control

- **Super Admin:** Full system access — configuration, user management, financial reports, branch management.
- **Manager:** Operational oversight, staff scheduling, inventory management, daily report review.
- **Cashier:** POS access, bill processing, payment confirmation, daily cash reconciliation.
- **Waiter:** Order taking, table management, kitchen communication, delivery of ready orders.
- **Kitchen Staff:** KDS access only — view, manage, and mark orders as prepared.
- **Delivery Driver:** Delivery order view, navigation, real-time status updates.

4.5 Financial Analytics & Reporting

- Live revenue dashboard with hourly, daily, weekly, and monthly breakdowns
- Cost-of-Goods-Sold (COGS) analysis against actual sales in real-time
- Profit margin tracking per menu item and per category
- Top-performing staff, tables, and menu items ranked by revenue generated
- Full audit log — every financial action is time-stamped and user-attributed
- Exportable reports in PDF and Excel formats on-demand

(Replace this placeholder with the actual screenshot from the system)

5. Technical Superiority

Seven Waves ERP is built on a carefully selected, modern technology stack that delivers unmatched performance, security, and scalability compared to traditional restaurant software solutions.

5.1 Quasar Framework (Frontend)

- **Universal Build Target:** A single Vue.js/Quasar codebase compiles to Web SPA, Mobile, Desktop (Tauri), and PWA — zero code duplication.
- **Performance:** Vite-powered build pipeline delivers sub-100ms hot module replacement and highly optimized production bundles.
- **Component Library:** 300+ Material Design components ensure a consistent, professional UI with minimal overhead.
- **Reactive Data Binding:** Vue 3 Composition API with Pinia state management ensures UI always reflects live data without manual refresh.

5.2 Supabase (Backend & Database)

- **PostgreSQL Foundation:** Industry-leading relational database with row-level security (RLS) — each user only accesses authorized data.
- **Real-Time Subscriptions:** Supabase Realtime pushes live database changes to all connected clients — no polling, no delays.
- **JWT Authentication:** Built-in auth with OAuth2 social login, magic links, and MFA support — zero custom auth code required.
- **Auto-Generated APIs:** Instant REST & GraphQL API layer from DB schema — reduces backend development time by 70%.
- **Row-Level Security:** Granular access control at the database layer — not just the application layer — for maximum security.
- **Edge Functions:** Serverless Deno functions for complex business logic without managing infrastructure.

5.3 Tauri (Native Desktop Runtime)

- **10x Lighter than Electron:** Tauri uses the OS native WebView — ~600KB installer vs. Electron's ~150MB. Faster install, less memory.
- **Rust Backend:** Powered by Rust — the world's most memory-safe, high-performance systems language. Zero crash risk from null pointers.
- **Offline Capability:** Local SQLite integration enables full POS and inventory operation without internet. Syncs to Supabase on reconnection.
- **Native OS Integration:** System tray, file system access, OS notifications, hardware printer integration — no browser sandbox restrictions.
- **Auto-Updater:** Built-in silent update mechanism — the app always runs the latest version without manual reinstallation.
- **Code Signing & Security:** Production builds are cryptographically signed — preventing tampering and meeting enterprise security standards.

7. Implementation Roadmap

Seven Waves ERP is deployed through a structured, phased implementation methodology designed to minimize operational disruption while maximizing rapid value delivery to the restaurant team.

Phase	Timeline	Milestone	Key Deliverables
Phase 1	Wk 1–2	**Discovery**	Requirements analysis, DB schema, Supabase setup, team onboarding.
Phase 2	Wk 3–5	**Core Modules**	POS terminal, table management, real-time inventory, auth & RBAC.
Phase 3	Wk 6–8	**Advanced Feats**	KDS, financial analytics, audit logs, delivery tracking, bill printing.
Phase 4	Wk 9–10	**Desktop Build**	Tauri packaging, offline sync engine, system tray, native notifications.
Phase 5	Wk 11–12	**Go-Live**	UAT, staff training, data migration, launch support, documentation.

Post-Launch Support

- 3-month post-launch hyper-care support — priority ticket resolution within 4 business hours
- Monthly performance review meetings with the restaurant management team
- Quarterly system updates including new features, performance improvements, and security patches
- Dedicated WhatsApp / Slack support channel for real-time staff queries

8. Return on Investment (ROI) & Business Benefits

The following table quantifies the direct, measurable impact of deploying Seven Waves ERP against the most common operational challenges in restaurant businesses.

Pain Point	Before Seven Waves	After Seven Waves	Impact
Manual Order Taking	~12% error rate	Digital POS — 0% errors	!‘ 15% revenue
Inventory Management	30–40% wastage	Real-time alerts	!“ 35% food cost
Billing & Payments	Slow, paper-based	Instant receipts	!‘ 25% turnover
Staff Scheduling	Manual spreadsheets	Role-based shifts	!“ 20% overhead
Financial Reporting	Monthly manual	Live analytics	Instant insights

Financial Impact Summary

- **Year 1 Estimated Savings:** 35% reduction in food waste + 15% revenue recovery from order accuracy = significant net positive within 6 months.
- **Operational Efficiency:** Staff spend 40% less time on administrative tasks, freeing capacity for customer-facing service.
- **Scalability:** Zero incremental software cost for adding new branches — the same license covers the entire restaurant group.
- **Compliance & Audit:** Full financial audit trail eliminates manual reconciliation and reduces regulatory non-compliance risk.

9. Pricing & Licensing

Seven Waves ERP is offered as a one-time licensed delivery with optional annual maintenance agreements. Unlike SaaS alternatives that charge per-seat monthly fees indefinitely, this model provides full ownership of the software with no recurring vendor lock-in.

- **One-Time License Fee:** Custom pricing based on branch count and feature modules selected. Contact the sales team for a tailored quotation.
- **Annual Maintenance (AMC):** Covers all updates, bug fixes, security patches, and 12 months of support. Priced at 15–20% of the one-time license fee annually.
- **Training Package:** Comprehensive staff training sessions (on-site and remote) included in the base package for up to 15 users.
- **Data Migration:** Full migration of existing POS and inventory data from legacy systems — included at no additional charge.

Note: All pricing is negotiable based on project scope, timeline, and long-term partnership terms.

10. Why Choose Seven Waves ERP

- Purpose-built for the restaurant industry — not a generic ERP retrofitted for hospitality
- End-to-end solution: POS, inventory, finance, HR, delivery — one platform, zero integrations needed
- Modern tech stack with 10+ year longevity — no vendor lock-in, fully extensible open codebase
- Offline-first architecture guarantees zero-downtime operations during internet outages
- Cross-platform: works on tablets, desktops, and web browsers simultaneously
- Built by a dedicated team with deep hospitality domain expertise and real-world production usage
- Proven with real production usage — not a prototype, MVP, or demo environment

Contact & Next Steps
